

Oak Tree Trimming

Curb Side

Each Home owner is responsible for pruning their curb side trees.

All Trees should be pruned to a minimum height of 6/7 feet over sidewalks and roadways to allow for pedestrians and vehicles and their antennas.

Basic Trimming Suggestions

If you do your own trimming, there are a few things to keep in mind when you get going. For starters, it's important not to cut a limb too short or leave it too long. Cut it as close to the "collar" of the branch as possible to avoid providing an entry point for disease and insects. Also, never top off a tree or severely cut back major branches. Doing so will seriously damage the natural structure of the tree, and the resulting growths will look thin, disproportionate, and unhealthy.
